Description :

Présentation de l'éditeurThe book provides a survey of numerical methods for acoustics, namely the finite element method (FEM) and the boundary element method (BEM). It is the first book summarizing FEM and BEM (and optimization) for acoustics. The book shows that both methods can be effectively used for many other cases, FEM even for open domains and BEM for closed ones. Emphasis of the book is put on

numerical aspects and on treatment of the exterior problem in acoustics, i.e. noise radiation.
